SUMMARY

Informatics student with hands-on experience developing mobile and web applications using Flutter, Laravel, REST APIs, and MySQL. Experienced in database design, application testing, and Agile software development, with a strong interest in building reliable software solutions and continuously learning new technologies. Comfortable across the stack: REST API design, relational database modelling, Git-based collaboration, and Agile/Scrum delivery.

EDUCATION

Bachelor of Informatics (Specializing in Artificial Intelligence) · *Ciputra University, Makassar* 2023 – Present

- GPA: 3.90 / 4.00
- Relevant courses: Machine Learning, Big Data, Computer Vision, REST API Development, Mobile App Development, UI/UX Design, Database Design

SKILLS

Languages: Dart, PHP, Python, C#, SQL

Frameworks: Flutter, Laravel, Unity, ARCore/Vuforia

Web & APIs: REST API Design, Postman, MVC, BLoC Architecture

Databases: MySQL, Supabase, RDBMS Design, ERD Modeling

Tools & Practices: Git, GitHub, Agile/Scrum, Sprint Planning, Kanban, Figma, Docker (basic)

ML / Data (applied): Python, scikit-learn, FastAPI, PySpark, Ultralytics (YOLOv11)

PROJECTS

MomEase — AI-Powered Mental Health Companion for Mothers

Role: Backend Developer, Database Designer, UI/UX Designer — Laravel, MySQL, REST API, Gemini API, Figma, Git, Postman — Team Project, 8-week sprint cycle

- Built backend services in Laravel and designed relational MySQL schemas (ERD) covering authentication, journaling, chatbot, blog, relaxation activities, and self-assessment modules across 6 core feature areas.
- Designed and exposed 20+ RESTful API endpoints consumed by the Flutter frontend, validating each endpoint with Postman before handoff to the mobile team.
- Integrated Gemini API on the backend to power an AI chatbot delivering empathetic, context-aware emotional support for pregnant and postpartum users.
- Designed the app's UI/UX in Figma and collaborated using Agile Scrum: sprint planning, Planning Poker estimation, Kanban boards, and Git branching strategy across an 8-week development cycle.

LokaIlmu — Teacher Professional Development Platform (System Design)

Role: Database Designer, UI/UX Designer, Frontend Developer — Flutter, Laravel, MySQL, REST API, MVC, BLoC

- Designed the relational database schema, ERD, and migrations as part of a complete Software Requirements Specification (SRS) covering functional, non-functional, and API interaction requirements.
- Designed the app's UI/UX (Figma) and specified the Flutter frontend architecture using the BLoC pattern, mapping screens to the Client–Server / MVC backend design.
- Specified 7 core modules — online training, digital library, discussion forums, mentor matching, chat, payment workflow, and progress tracking — with corresponding wireframes and sequence diagrams.

NPLC Rally Games Management System — Competition Management Web Platform

Role: UI/UX Designer, Database Designer, Frontend Developer — Laravel, MySQL, JavaScript, HTML/CSS

- Designed the UI/UX and database schema (MySQL) for the platform, modeling real-time booth availability, skill cards, and competition progress data.
- Built the frontend admin dashboard enabling committee members to manage rally data, submit and validate scores, replacing manual spreadsheet workflows and reducing human error.
- Collaborated with backend developers under a client-server architecture to deliver a scalable solution used during a live national-level event.

ReplikaGO — AR-Based Cultural Heritage Learning Platform

Role: Unity Programmer, UI/UX Designer — Unity, C#, Vuforia Model Target, Augmented Reality

- Programmed an AR mobile app in Unity/C# digitizing artifacts from Museum Balla Lompoa using Vuforia Model Target, letting users scan physical artifacts and view interactive 3D reconstructions.
- Programmed gamification features (3D artifact reconstruction puzzles and quizzes) and designed the UI/UX flow to increase engagement, integrating AR visualization with multimedia storytelling.
- Applied User-Centered Design methodology (field observations, interviews, iterative prototyping) and ran usability testing with 7 participants to refine UI/UX, AR tracking, and onboarding flow.

EXPERIENCE

Secretary — *Informatics Student Union UC Makassar* 24/25 Sep 2024 – Jul 2025

- Managed documentation and coordination for 3 student-led tech events, including DevForge Hackathon and the NPLC national competition, collectively serving 400+ participants.
- Provided cross-divisional oversight to Creative & Publication, Event, and Inventory divisions, monitoring progress and flagging blockers to keep operations on track.
- Produced structured post-event reports and documentation for large-scale student competitions, seminars, and exhibitions.

Coordinator, Publication & Documentation Dept. — *Orientation Week UC Makassar 2025* Dec 2024 – Sep 2025

- Led a Publication & Documentation division of 21 members plus 3 coordinators within a 150+ person organizing committee.
- Planned and tracked the division's task schedule, coordinating with 4 division heads to ensure smooth execution of a 350+ attendee orientation program.
- Directed visual design and event branding, managing administrative workflows across cross-functional teams.

ACHIEVEMENTS

2nd Place — UI/UX Design Competition — *Politeknik Negeri Bali* Oct 2025

- Designed user-centered interface with strong usability principles; placed 2nd among competing university teams

Regional Finalist — Hackathon Binar × Dispora S8 — *Makassar* Nov 2023

- Built AR-based tourism app using Unity and ARCore in 24-hour hackathon; selected as regional-level finalist from 15+ teams
